

CLAIMS:

1.-15. (Cancelled)

16. (Currently Amended) A terminal assembly, comprising:

at least one electrical device;

at least one electrical device terminal extending from
the electrical device;

at least one wire wound at least partially around the
electrical device terminal;

at least one connector device coupled to the electrical
device; and

at least one connector device terminal extending from
the connector device, at least a portion of the connector
device terminal being adjacent to at least a portion of the
electrical device terminal and electrically connected thereto,
the connector terminal including a lower connector terminal
portion extending from within the housing, a lateral connector
terminal portion extending perpendicularly from the lower
connector terminal portion, and an upper connector terminal
portion extending perpendicularly from the lateral connector

terminal portion away from the lower connector terminal
portion and housing..

17. (Original) The terminal assembly of Claim 16, further comprising:

at least a first arm extending from the connector device terminal such that it flanks the electrical device terminal.

18. (Original) The terminal assembly of Claim 17, further comprising:

at least a second arm extending from the connector device terminal such that it flanks the electrical device terminal.

19. (Original) The terminal assembly of Claim 18, wherein the electrical device terminal is at least partially between the first and second arms.

20. (Original) The terminal assembly of Claim 19, wherein the electrical device terminal is at least partially resistance welded to the first and second arms.

Attorney Docket DP-307784Div
Application Number 10/666,713
Responsive to Action dated September 22, 2004
Amendment dated October 18, 2004

21. (Original) The terminal assembly of Claim 19, wherein the electrical device terminal is at least partially soldered to the first and second arms.
